What is claimed is:

1. A method of eliciting an immune response against a bovine virus comprising, combining at least one bovine viral epitope and at least one heat shock protein to form a purified epitope/heat shock protein complex, and administering an immune system stimulating amount of said purified epitope-heat shock protein complex to an animal.

The method of claim 1 wherein said boving viral epitope further comprises a supermotif.

- 3. The method of claim 1 wherein said boyine viral epitope further comprises an allele specific peptide motif.
- 4. The method of claim 3 wherein said allele specific peptide motif is selected from the group consisting of BoLA-A11, BoLA-A20, BoLA-HD1, BoLA-HD6 and BoLA-HD7.
- 5. The method claim 1, wherein said bovine viral epitope is between 5 and 25 amino acids in length.
- 6. The method of claim 1, wherein said bovine viral epitope is between 5 and 15 amino acids in length.
- 7. The method of claim 1, wherein said viral epitope is between 8 and 10 amino acids in length.
- 8. The method of claim 1 wherein said epitope is from a virus selected from the group consisting of bovine viral diarrhea virus, bovine respiratory syncytial virus, parainfluenza virus III, bovine corona virus, and bovine rota virus.

- 9. The method of claim 1 wherein said heat shock protein is selected from the group consisting of HSP 60, HSP 70 and HSP 90 families.
- 10. The method of claim 9 wherein said heat shock protein is gp96
- 11. The method of claim 1 wherein said hear shock protein is a heterologous heat shock protein.
- 12. The method of claim 1 wherein said heat shock protein is a homologous heat shock protein.
- 13. The method of claim 1 wherein said epitope/heat shock protein complex is formed in vitro.
- 14. The method of claim 1 wherein said epitope/heat shock protein complex is formed in vivo.
- 15. The method of claim 1 wherein/said epitope is a recombinant epitope
- 16. The method of claim 1 wherein said epitope is a synthetic peptide
- 17. The method of claim 16, wherein said synthetic peptide is synthesized by solid phase chemistry.
- 18. The method of claim 1 wherein said animal is a ruminant.
- 19. The method of claim 1/8 wherein said ruminant is a Bovidae.
- 20. The method of claim 19 wherein said Bovidae is of the genus Bos.

5

- A method for eliciting an immune response to a boxine virus comprising, 21. combining at least one bovine virus allele specific peptide motif containing epitope of at least 8-10 amino acids long and a heat shock protein gp96 to form a purified epitope/heat shock protein complex, and administering an immune system stimulating amount of said purified epitope-heat shock protein complex to a ruminant.
- A composition comprising, a purified epitope/heat shock protein complex 22. containing at least one bovine virus epitope complexed with at least one heat shock protein, and a pharmaceutically acceptable carrier, diluent or excipient.
- The composition of claim 22, wherein said bovine viral epitope further comprises a 23. supermotif.
- The composition of claim 22, wherein said bovine viral epitope further comprises 24. an allele specific peptide motif.
- 25. The composition of claim/24, wherein said allele specific peptide motif is selected from the group consisting of BoLA-A11, BoLA-A20, BoLA-HD1, BoLA-HD6 and BoLA-HD7.
- The composition claim 22, wherein the bovine viral epitope is between 5 and 25 26. amino acids in length.
- The composition of claim 22, wherein the bovine viral epitope is between 5 and 15 27. amino acids in length.
- 28. The composition of claim 22, wherein the bovine viral epitope is between 8 and 10 amino acids/in length.

- 29. The composition of claim 22 wherein said epitope is from a virus selected from the group consisting of bovine viral diarrhea virus, bovine respiratory syncytial virus, parainfluenza virus III, bovine corona virus, and bovine rota virus...
- 30. The composition of claim 22, wherein said heat shock protein is selected from the group consisting of HSP 60, HSP 70 and HSP 90 families.
- 31. The composition of claim 30 wherein said/heat shock protein is gp96
- 32. The composition of claim 22, wherein said heat shock protein is a heterologous heat shock protein.
- 33. The composition of claim 22, wherein said heat shock protein is a homologous heat shock protein.
- 34. The composition of claim 22, wherein said epitope/heat shock protein complex is formed in vitro.
 - The composition of claim 2/2 wherein said epitope/heat shock protein complex is formed in vivo.
- 36. The composition of claim 22 wherein said epitope is a recombinant epitope
- 37. The composition of claim 22 wherein said epitope is a synthetic peptide.
- 38. The composition of claim 37 wherein the synthetic peptide is synthesized by solid phase chemistry.
- 39. A composition comprising, a purified epitope/heat shock protein complex containing:

 a gp96 heat shock protein;

at least bovine viral epitope of 8-10 amino agids long, said epitope being from a virus selected from the group consisting of bovine viral diarrhea virus, bovine respiratory syncytial virus, parainfluenza virus III, bovine corona virus, and bovine rota virus; and a pharmaceutically acceptable carrier, diluent or excipeint.
